

**Maximize the
value of your
forage!**

Maximize the value of your forage

 entrepreneurship

 technology

 organization

 environment

A good mowing and feeding strategy is crucial for the success of your business. This makes it important to carefully consider the storage of your forage. Agridek is the inventor of the 'lasagna silage' with a fully mechanized covering system. Thanks to our farming background and years of experience, we know exactly how you can get the maximum value out of your forage with a covering system.

We believe that creating value goes beyond maximizing the return for your business. Of course, the financial picture is very important. But it's also about future-proof investing by choosing modern technology that is both very **robust and reliable**.

A covering system also increases your **job satisfaction**. The work is less strenuous, you are **less dependent** on others, and even **the weather has less impact** on your work process. A covering system from Agridek is also a smart choice for **the environment**.

We understand that as a farmer, you might not have a strong feeling about everything. Agridek stands beside you and helps you gain insight into the complete picture. Together, we go through all the aspects and look for **the best total concept**. Your company, your situation, and your wishes and possibilities are central to this.

You determine how we will collaborate. To make it easy for you, we have developed **three packages**. For each package, we clearly state what you can expect from us and what not. You know exactly where you stand, and we have **a solution for almost every budget**.

This way, we ensure that you get the **maximum value from your forage**.

Our development is your development

- Agridek is the inventor, the pioneer who has been changing the market since 1999.
- More than 170 covering systems on new or existing trench silos.
- Agridek offers a total concept.
- Our innovations truly add value.
- Many positive stories from our customers are the proof.
- Agridek is reliable and 100% specialized in covering systems.
- We work with you the way you want.

Agridek stands beside you as a dairy farmer and entrepreneur. In everything we do, we focus on maximizing value for you and your business.

We believe that making a full lasagna clamp is the way to provide the livestock with high and constant quality feed throughout the season. The clamp is built in layers like lasagna, with each evenly over the entire silo. This preparation ensures that the forage is of the same high quality from the beginning and to end and creates an efficient ensiling and feeding process.

The benefits of a lasagna clamp:

- Constant and balanced feeding.
- Save on by-products through complete forage. (energy from the first spring cuts, structure from the middle summer cuts, and protein from the last cuts).
- No heating through sufficient and constant feeding speed.
- Tasty forage resulting in high forage intake.
- No traditional agricultural film needed.
- Faster and more efficient ensiling and feeding.

4 times value for you as a farmer

Value for you as an entrepreneur

Value of technology

Value for your organization and job satisfaction

Value for the environment

As an entrepreneur, you want to maximize the return from your business while minimizing risks. To get the most out of your forage, you need to consider all aspects:

- Maximum return for your business;
- Future-proof technology;
- Optimal efficient workflow on your farm;
- Minimal environmental impact

Agridek stands beside you and looks at the complete picture with you. Specifically focused on your wishes and situation.

Value for you as an entrepreneur

Constant and high-quality feeding is what you want to achieve.

It is important to **optimize your business processes** and **reduce your costs**.

Constant and high-quality feed. - Increase in cow health, milk production, and milk quality. - Optimal feed intake through tasty feed. - Higher milk production with better components. - Less correction with by-products.	Optimize mowing and ensiling process - Better use of own land. - Less dependent on external advisors. - Build and correct your next cuts according to your own insight. - Create the clamp you want to feed during the summer.
No heating - Thanks to a high-quality and permanent cover sheet, better density in the clamp. - Always sufficient and better feeding speed through proper silo advice.	Lower costs, more return - Savings on by-products. - No costs for silage plastic. - Savings on external expertise and contractors. - No more feeding or discarding poor forage. - The system pays for itself.

Value of technology

At Agridek, we choose to apply technical innovations that truly add value in terms of quality, convenience, and insight. All solutions are robustly designed and therefore reliable. We ensure that the technology supports the user, making you self-sufficient. The smart design minimizes maintenance and prevents failures.

	Fully mechanized, 100% reliable - Cover your clamp within 30 minutes by one person. - Easy to use and not dependent on external factors. - Maximum reliability through pragmatic design choices.	Robust, powerful machine - Can pull the entire cover sheet lengthwise. - Fast and strong at the same time. - Driving and rolling independently of each other. - Can roll a fully filled cover and rainwater at full and constant speed. - Rainwater on the cover cannot enter the clamp.
Contemporary design - Designed to blend into the landscape. - It exudes professionalism, robustness, and power. - Design with large wheels, wheelbase, and fully galvanized. - Sleek and neat: all pipes are as much as possible galvanized and buried underground.	Customization for every covering need - Agridek advises on custom solutions for specific situations. - Continuous investment in further developing the automation of the covering process.	100% leak-proof water system - Little to no risk of leaks. - Optimized flow rate. - As many fixed connections and replaceable parts as possible. - Each hose has its own shut-off for safety. - Mixing of ditch water and brine is excluded.

Pier Jan Noordmans - Organic dairy farm - 135 cows - 90 ha land.

We have been working with lasagna clamp for about 10 years, it fits very well with our farming operations. Due to grazing, you often have small patches to mow, so you open the clamp much more often than when you mow it all at once. We were looking for a storage solution and chose a system from Agridek. The experiences are very good, we are very satisfied with this system. The cover sheet comes off quickly and it can be done by one person, so you need to plan less tightly. We generate our own electricity, so this electric version of the covering system fits nicely in the cycle and is reliable.

Bakker - Dairy farmer - 500 cows - 200 ha land - 13 employees

The automatic covering of silos had been of interest to me for years. The reason for this is that covering grass and maize silos is physically very heavy.

We had a nice number of smaller silos. There, it was often necessary to ensile the silos well above the wall, resulting in a bread clamp on the trench silo. In the part of the grass clamp that comes above the walls, you have a lot of quality loss, from there the idea arose to significantly expand the feed storage and choose a very wide silo. Such a large silo can really only be covered with a portal system!

Usually, if it seems too good to be true, it isn't true. But in this case, it turns out to be true. We have a large silo, and that requires a very large covering system. But I am very surprised at the ease with which it all went. Agridek is a small but very passionate family business, and we are very enthusiastic.

The value for your organization and job satisfaction

As an entrepreneur, you are naturally constantly optimizing your processes. We are convinced that our solutions increase revenue, reduce workload, and provide peace of mind. Of course, with as little hassle and dependence on external parties as possible.

Guaranteed good (interim) covering

- With less effort, more weight on the forage.
- No more dragging heavy sandbags or tires.
- Less affected by weather influences.
- Heating has no chance.

Future-proof total concept

- Independent and future-proof business advice.
- Thinking along and setting up silos.
- Full project management possible.
- No hassle, a lot of knowledge and practical experience.
- Less labor-intensive and less dependent on external factors.

Less effort, more job satisfaction

- Good covering with less effort and increased job satisfaction.
- Ensiling without stress.
- More time for the enjoyable aspects of the work.

Tax benefits & subsidy

- You can achieve a higher return with the system.
- The investment pays for itself.
- You can use various tax benefits and subsidies.
- We are happy to advise you.

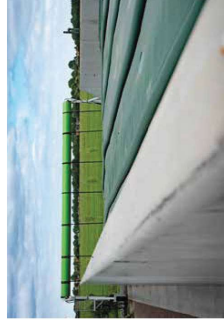

Less dependent

- Fully mechanized, cover your clamp alone and within 20 minutes.
- Mow when it suits you.
- More independent of external parties or weather conditions.
- Quick response, flexible day schedule.

The value for the environment

By using lasagna clamp in combination with a covering system from AgriDeck, you can optimally utilize your own land and reduce the impact on nature. It is feasible to feed constantly and evenly and save significantly on by-products. This also results in healthier livestock and no need for agricultural plastic.

Natural pest control

- Clean and organized forage storage leads to less vermin (an average of 30%).
- This also prevents disease spread.

Less impact on nature

- Optimal use of your own land while reducing the impact on nature.
- Fewer by-products needed.
- Moving and grazing intermittently becomes feasible again.

No agricultural plastic and tires

- No unnecessary use of agricultural plastic and tires anymore.
- By using the AgriDeck system, you save significantly on agricultural plastic annually.

Future-proof entrepreneurship

- You reduce CO2 emissions by ensiling faster with less power and fewer tractor hours.
- There is only one feeding place, reducing movement.

Up to 80% less silage juice

- Rainwater and silage juices remain separated.
- You can achieve an 80% reduction in silage juice.
- This meets the latest legal requirements in this area.

Jos Faassen - Dairy farm Noordzigt - 140 cows - 86 ha land

We wanted to take a new direction with our dairy farm by investing in higher forage quality and labor savings. Because we want to ensile in between and therefore often have to open and close the clamp, our decision quickly fell on the system from AgriDeck.

This system fits very well with our company because we are a medium-sized company with few workers. We can now feed the same quality all winter, so the cows no longer have a change in the ration. Because you are much more flexible, you can also ensile small quantities, which previously required too much labor. Now you do it effortlessly. This can yield so much profit.

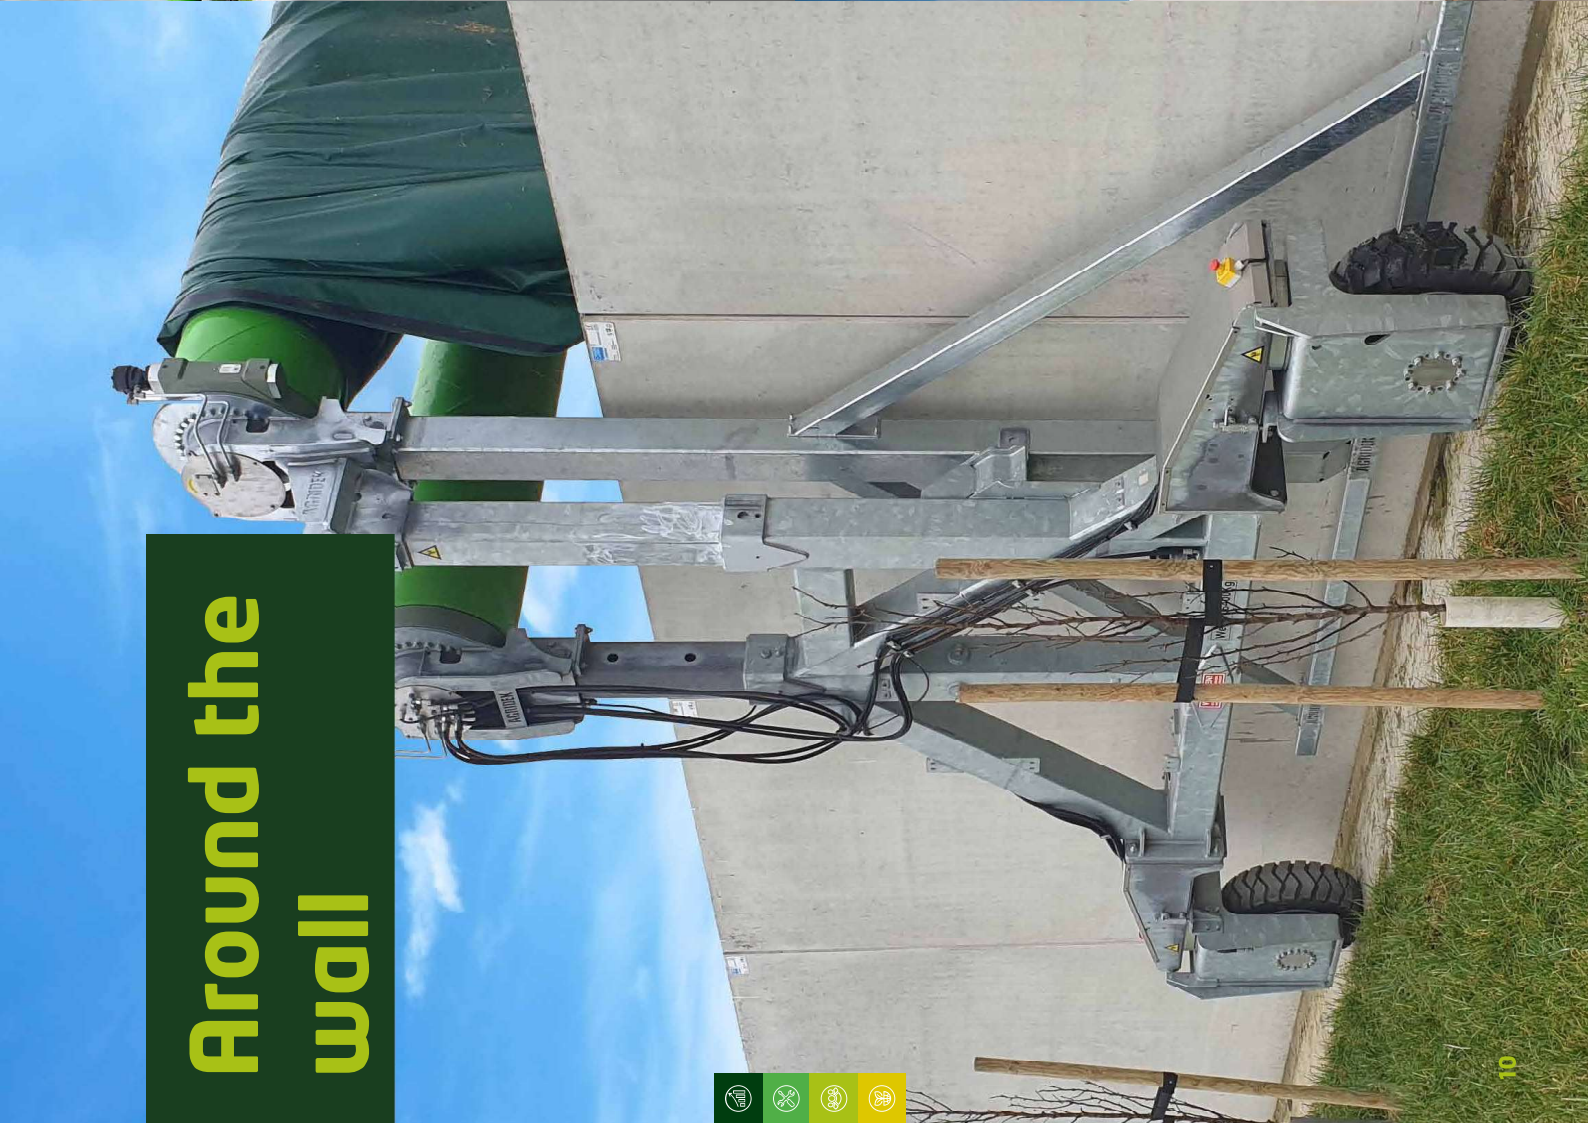

Geitenmelkerij Trix - 1200 dairy goats - Organic

In the conventional situation, we didn't need that many silage bales; with about 1000 per year, we could manage well. But in this organic situation, it's 2000 to 2500. Then we started thinking carefully about our feeding strategies and forage storage.

The trend is to ensile in a lasagna clamp, where all cuts are layered thinly over each other. This results in enormous clamp density, and when you start feeding, you have a constant ration all year round, which is a great advantage for all animal species.

We chose 3 silos side by side with high walls to save as much space as possible. This not only saves space but also money, which allowed us to purchase this covering system. The design was so well thought out and drawn up that we had confidence in it. And it shows.

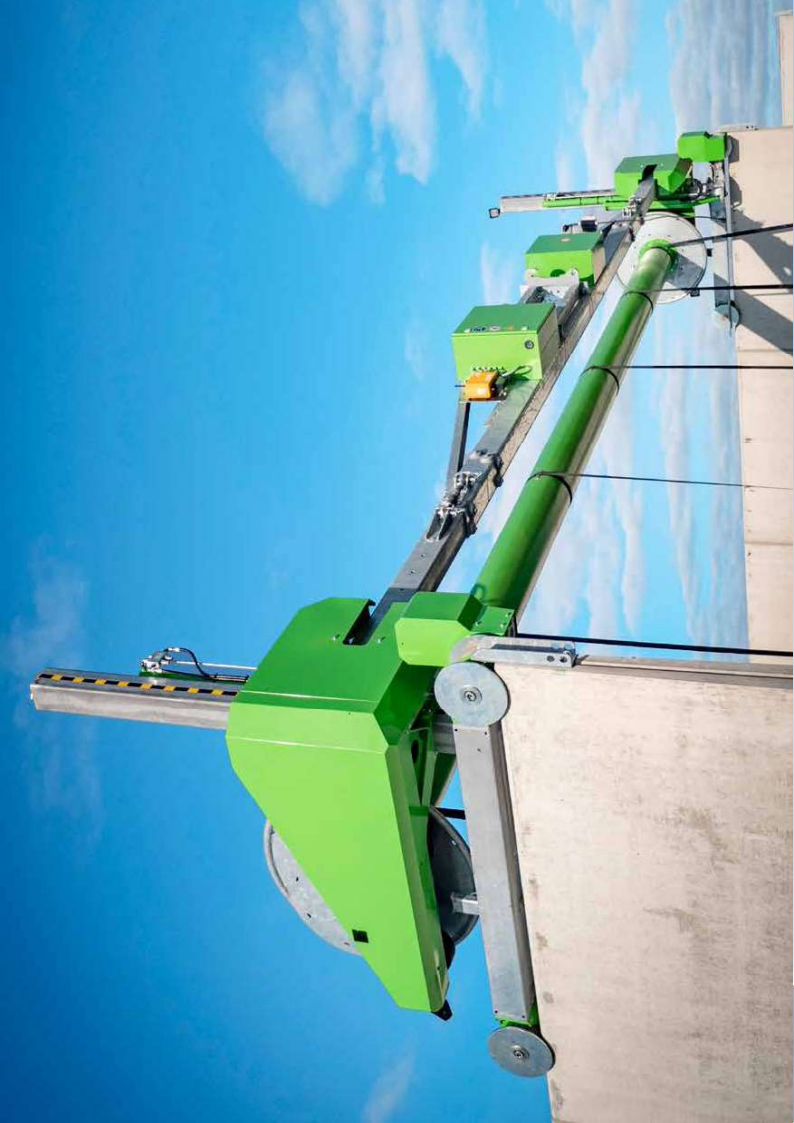

Around the wall

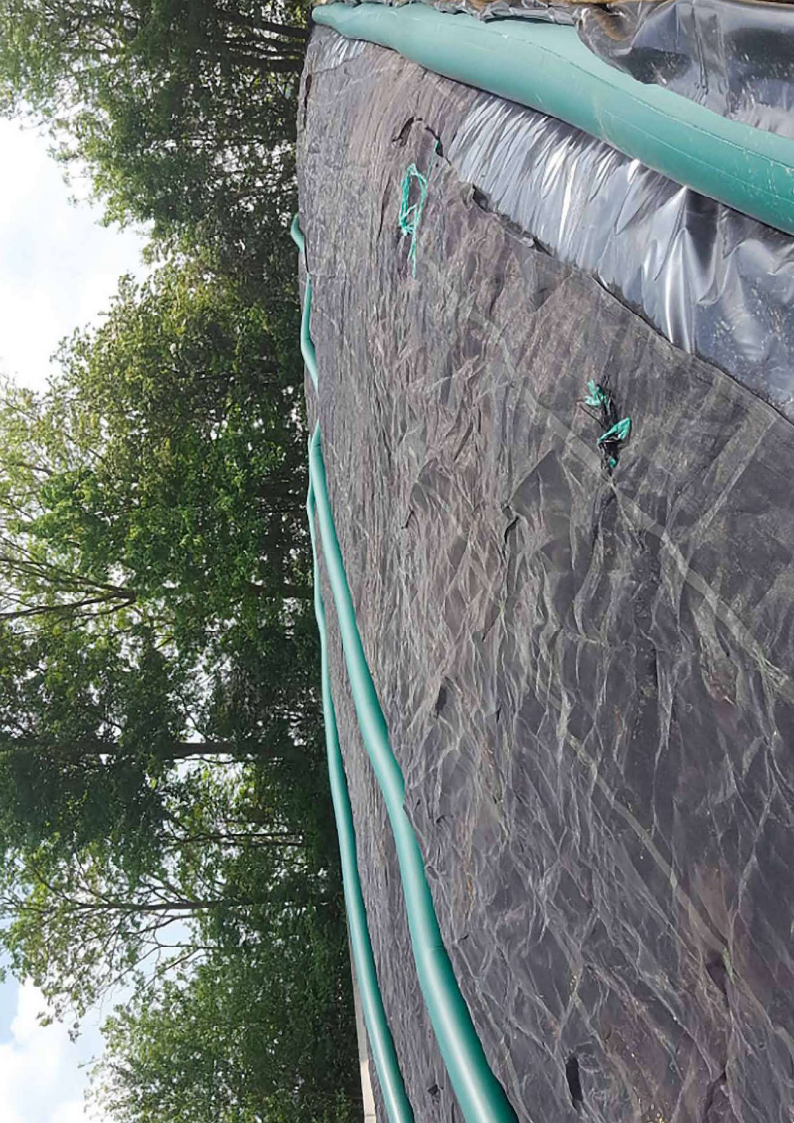

On the wall

Inside the wall

A collaboration that suits you.

Basic

Telephone advice on the type of covering system & quote (based on provided data).
Training: machine operation.

Not included:

Consultations on feeding concepts and silo layout.
Visiting reference addresses.
Training on how to ensile.
Multiple quotes and thinking along with trench silo construction.

Compleet

Site visit

Extensive consultation on feeding concepts, silo layout, and type of covering system.
Visiting reference addresses.
Training: machine operation and how to ensile.
Guidance during the first cut.
1 year of forage advice.

Not included:

Permit scan.
Quotes for silo walls.
Thinking along with groundwork.

Ultimate

Extra:

Comparison of various possible feeding concepts and silo construction.
Permit scan: analysis of site boundaries and permit requirements and possibilities.
Financing plan (including investment needs, returns, etc.)
Quote and construction of the silo.
Helping with the choice of walls.
Leading role in groundwork and trench silo construction.

Years of experience that counts

For over 20 years, Agridek has been developing the best lasagna clamp techniques for optimizing forage. What started as a desire from our own livestock farm has grown into an organization that is an important sparring partner and supplier of covering products. We supply these products to many livestock farmers at home and abroad.

Hotze Bosch

Founder of "The Lasagna Clamp" with the world's first covering system since 1999 from our own dairy farm.

Jan Bosch

CEO and driving force behind the company since 2014.

Why a covering system from Agridek?

- You have a dedicated contact person with extensive knowledge.
- Agridek is reliable and 100% specialized in covering systems.
- In everything we do, we focus on maximizing value.
- Agridek is the inventor of the lasagna clamp and brings innovations that matter.
- Value for your business and value of technology.
- Value for your organization & job satisfaction and value for the environment.
- Collaboration in the way that suits you best.
- The covering system that suits your situation and needs.
- Proven quality at a fair price.
