

## Why choose a covering system from Agridek?

- Agridek comes from a **farming background** and stands alongside you as a livestock farmer and entrepreneur.
- You have a dedicated contact person with **extensive knowledge**.
- Agridek is reliable and **100% specialized** in covering systems.
- In everything we do, we focus on **maximizing value**.  
*Value for your business, value of technology, value for your organization and job satisfaction, and value for the environment.*
- Agridek is the **inventor of the lasagna clamp** and brings **innovations** that matter.
- **Collaboration** in the way that suits you best.
- The covering system that suits **your situation and needs**.
- Proven quality at **a fair price**.

## Agridek Summed up the best choice

Agridek also strong in:

- forage advice
- cover sheets
- portal systems
- duo-portal systems
- rail system
- reel systems
- cover tubes
- cutting edge curtains

maximize value from forage

# Rail system

interchangeable rolls

With this rail system, you can easily cover different silos and simultaneously feed and ensile. The machine is adjustable in width and height and runs over the silo wall. This prevents "dead space" between the silos, saving a lot of square meters. The rail system is especially useful for long & narrow silos and can be used for both new and existing trench silos.

Extra innovative is that this machine can pass a laid roll on one partition wall. This means that only one partition wall is needed between two trench silos, saving a lot on trench silo construction. It is easily movable with a shovel or telehandler and works fully electrically on a battery and with a remote control.

In addition to this interchangeable roll, Agridek also offers a rail system version with a fixed roll.

## Rail system with interchangeable rolls

### Why choose a rail system with interchangeable rolls?

The rail system with interchangeable rolls consists of a self-propelled frame that is adjustable in width and height. This machine allows you to cover multiple silos of different widths.

The rail system is fully electric and **works on a 24-volt lithium battery pack** and can be charged via mains power or **solar panel**. The **proportional wireless remote control** allows you to synchronize driving and rolling speed, making very efficient use of battery power. Switching to another silo is easy with a shovel or telehandler. Because the interchangeable roll with cover sheet always stays with the silo, you only need to transfer the **relatively light rail system** of a maximum of 2200 kg.

Easy to operate with the wireless remote control.

Maximize value from forage

## Rail System INTERCHANGEABLE ROLLS

- Suitable for trench silos up to 12 meters wide, 4.0 meters high, and 80 meters long.
- Fully on 24-volt lithium battery pack.
- Standard with proportional wireless remote control.
- Hydraulically adjustable in height.
- Lifting capacity above 2.5 tons with a full roll.
- Front-wheel drive, so the system can never tip over.
- Sufficient power to allow "Rolling with water."
- Main frame adjustable in width to compensate for deviations in silo dimensions.
- Sliding cams on the wall to sweep away dirt.
- Long lifespan due to galvanized frame.
- Signal lights and beeper with adjustable sound level.
- Standard LED lights via remote control.

### ▪ Many extra options available such as:

- Solar panel including adjustable to sun direction.
- Hydraulic width adjustment for different width trench silos.
- Automatic locking system via the remote control.
- Extra support stands for faster operation.
- Extra support stands for faster operation.
- Separate lifting stand to remove a roll with cover from the silo.
- Extra batteries for extended usage.
- Custom attachment part or suitable for forks.
- Cutting edge curtain.
